EventCraft AI — 2-Minute Video Presentation Script

Official Hackathon Video Demo Guide • Complete Simple & Technical Versions

1. Pre-Recording Checklist & Live Test Values

Parameter	Value to Enter Live on Screen	Purpose & Verification
Event Category	Wedding	Triggers 48% venue/catering benchmark & D-240 timeline rules
Event Title	Golden Hour Terrace Reception	Real-time reactive header update in right blueprint preview
Target Date	2026-09-18 (Test error: yesterday first)	Proves past-date error validation, then computes days-to-go
Location	Napa Valley, CA	Demonstrates localized vendor and logistics generation
Budget & Guests	$35,000 | 120 Attendees	Calculates $292/guest intensity; verifies exact 100% budget sum
Theme Directive	Sun-drenched Tuscan picnic, peach linens	Generates custom palette (#C86D51, #F9A66C) and vendor RFPs

2. Version 1: Simple Terms Script (Conversational & Natural)

Best for: General audiences, intuitive walkthrough, smooth pacing.

Timecode	What to Do on Screen	Spoken Narration (What to Say)
0:00 – 0:25 (Intro)	• Start at http://localhost:5173 • Show full-width studio workspace • Point to FastAPI: Live badge	*"Hi everyone! This is EventCraft AI—an intelligent event planner that helps anyone plan weddings, birthday parties, or community gatherings in seconds.* *Instead of messy spreadsheets, we built an asymmetric studio: left side to configure details, and right side with instant live previews before you even click generate."*
0:25 – 0:50 (Edge Case & Live Input)	• Select yesterday's date or 0 budget • Click Generate → show red warning • Type valid data live on screen • Point to reactive countdown & $292/guest	*"First, notice error handling: picking a date in the past immediately gives a clear warning.* *Now let's enter real details: a 120-guest wedding in Napa Valley with a $35,000 budget. Notice how the right panel computes the countdown and $292 per-guest cost live as I type."*
0:50 – 1:25 (AI Synthesis & Results)	• Click Generate Event Plan • Highlight spinner & shimmer • Confetti triggers! • Click Budget, Timeline, Vendor, & Ideas tabs	*"Now I click Generate. In seconds, Google Gemini builds our complete blueprint.* *Under Budget, every dollar adds up exactly to our $35,000 budget with zero math errors. The Timeline maps milestones from months out down to party day. Under Vendors, it even wrote ready-to-send inquiry emails and questions."*
1:25 – 1:50 (Saved & Directory)	• Click 'Saved Events' in top nav • Click 'Open Plan' on a card • Click 'Vendor Directory' • Filter category & click Copy RFP	*"Everything is saved automatically to our local database. In Saved Events, I can reopen any previous blueprint with one click.* *We also built a Vendor Directory where you can browse vetted vendor standards and copy ready email inquiries instantly."*
1:50 – 2:00 (Outro)	• Scroll to top view of the plan • Show polished pastel studio	*"EventCraft AI turns hours of event stress into an automated, precision workflow. Thanks for watching!"*

3. Version 2: Technical Terms Script (Engineering & Hackathon Judges)

Best for: Engineering evaluations, demonstrating full-stack architecture & AI schemas.

Timecode	What to Do on Screen	Technical Narration (What to Say)
0:00 – 0:25 (Architecture)	• Display 12-col asymmetric grid • Point to FastAPI: Live status • Highlight WCAG AA contrast palette	*"Hello judges. This is EventCraft AI—an intelligent event engineering suite.* *Our architecture pairs a React 18 and Vite frontend utilizing Tailwind and Framer Motion with a Python FastAPI backend, SQLAlchemy ORM, and Google Gemini. We designed an asymmetric two-pane studio prioritizing WCAG AA contrast and zero layout shift."*
0:25 – 0:50 (Validation & State)	• Input past date / $0 budget • Show accessible inline error alert • Enter valid Napa wedding specs • Highlight reactive blueprint math	*"To ensure state integrity, client-side validation instantly flags non-positive budgets or dates in the past with ARIA alerts.* *As valid parameters are typed, our client state dynamically computes countdown horizons, attendee intensity, and domain capital allocation benchmarks in real time prior to API submission."*
0:50 – 1:25 (GenAI & Reconciliation)	• Click Generate Event Plan • Show loading shimmer state • Review Budget Ledger (100.0% sum) • Review Timeline (D-240 to D-Day) • Review Vendor RFPs & Ideas	*"On submission, FastAPI prompts Google Gemini via structured Pydantic schemas. Gemini synthesizes a full JSON blueprint.* *Our backend reconciliation algorithm mathematically enforces that all category percentages sum strictly to 100.0% with zero rounding drift. The response maps reverse-chronological milestones, customized vendor RFPs, and color palettes."*
1:25 – 1:50 (Persistence & Catalog)	• Open 'Saved Events' modal • Query GET /api/events • Open 'Vendor Directory' modal • Copy inquiry template with feedback	*"Generated blueprints persist to SQLite via SQLAlchemy. Clicking 'Saved Events' executes a GET /api/events query to inspect, reload, or delete records.* *We also built a Vendor Directory modal with standard percentage allocations and copyable inquiry templates with instant clipboard feedback."*
1:50 – 2:00 (Deployment & Outro)	• Show clean production interface • Note Render & Vercel readiness	*"Configured for deployment on Render with Uvicorn and Vercel with automatic CORS regex handling, EventCraft AI converts complex logistics into an automated, precision system. Thank you!"*

4. Hackathon Submission Criteria Compliance Matrix

Checklist Requirement	How It Is Demonstrated in This 2-Min Walkthrough
Core features in logical order	Configuration -> Live Blueprint Preview -> AI Generation -> Results Analysis -> Saved DB & Directory
Data entered live, not pre-filled	You type 'Golden Hour Terrace Reception', 'Napa Valley', '$35,000' live while recording.
Success AND error/edge cases shown	Demonstrated at 0:25 by picking a date in the past, triggering immediate validation warning.
GenAI usage clearly pointed out	FastAPI invoking Google Gemini with structured Pydantic schemas highlighted during generation.
AI responses shown to be dynamic	Demonstrated unique Napa wine pairing notes, D-240 vineyard contract milestones, and specific RFP text.

Total video length under 4 minutes	Timed precisely for 1 minute 50 seconds to 2 minutes total duration.
